

Provide a brief (3- to 4-sentence) description of how and why the output was displayed.

The reason we see this result is because the main function generates a fresh instance of a Person with specific characteristics:

aged 25, named "Patrick", weighing 165.03, and capable of performing actions like walking and running. Subsequently, it utilizes the getName() method to fetch the individual's name and displays it. Following that, it prompts the person to walk, leading to the display of "I am in walk()".

Lastly, it instructs the person to run a distance resulting in the output "I am in run()".
